a clean cage for a general health check (Table 1). Detailed methods for the behavioral tests are described in the Supporting Information. Balance beam test: To evaluate motor coordination and balance, the mice were allowed up to 60 sec to traverse a narrow beam. The beams were square or round strips of wood 1 m long with a cross-section of 5, 12, or

St. Martin - Heroes in Heaven

mice were chewing up the linens in the monastery hospital. St. Martin spoke to the critters and promised to feed them if they left. He did not want to see the animals poisoned and he did not want the linens destroyed either. All of the mice left the building and lived in a field near the town. To this day there is no trouble with mice in the

Natural Selection Lab - Augusta University

5

Calculate the frequency of each allele for the survivors of Round 1. Record results in Table 2. Allele frequencies of the initial population have already been

Effect of age on ABRs in mice with EphA4 mutations

Subjects were 45 C57BL/6J mice. The first round of testing included 41 mice (5 were eventually excluded because of inability to complete genotype testing). Ages of these mice ranged from 2 to 9 months. Twenty-six of the mice were wild type, EphA4+/+ genotype; 5 mice had a heterozygous mutation, EphA4lacZ/+; 5 mice had the homozygous
